Irsal Lazuard Izzatillah

Software Engineer — Backend & Distributed Systems

Location: Bandung, Indonesia Email: irsallazuard547@gmail.com

LinkedIn: linkedin.com/in/irsal-lazuard-izzatillah-850927229 GitHub: github.com/IrsalLaz

Portfolio: irsal-lazuard.vercel.app

SUMMARY

Software engineer at an earned-wage-access fintech, building backend systems in Go, Node.js and Laravel. Works on authentication and authorization, payment and disbursement flows, and the migration of a Laravel monolith into services. Takes features from PRD to deployment and works closely with finance, investment and business teams.

SKILLS

Languages: Go, JavaScript (Node.js), PHP, SQL, Python
Backend: Fastify, Laravel (Sanctum, Spatie Permission, Horizon), Sequelize, GORM, Flask, REST API design
Data & Messaging: MySQL 8, Redis, RabbitMQ, MinIO
Security: OAuth2, JWT (RS256, JWKS), token introspection, TOTP 2FA, RBAC, rate limiting (token bucket, fixed window)
Architecture: Transactional outbox/inbox, saga choreography, change data capture, feature-flagged migration, idempotent APIs
Tools: Git, Postman, node --test, go test, PHPUnit, PlantUML, Next.js

EXPERIENCE

Software Engineer — Duluin (PT. Rasa Aksata Nusantara), Bandung Apr 2025 – Present

- Designed and implemented an event-driven migration of identity and access from a Laravel monolith to a dedicated auth service (Node.js, Go): RabbitMQ saga with transactional outbox/inbox, trigger-based change data capture, gateway-level authorization and a reversible, feature-flagged cutover, covered by automated and end-to-end tests.
- As PIC, designed ROI calculation and bank disbursement for investors, with role-based approval, split payouts, automatic ledger records and transfer receipts, significantly reducing payout time.
- As PIC, designed and implemented the claim disbursement integration between the group's HRMS app and Duluin's payment pipeline (Go, Laravel), using OAuth2 client credentials, idempotent claim IDs and approval steps.
- Built tenant API credentials with approval-based key rotation, TOTP 2FA for admin accounts, and token-bucket rate limiting at the API gateway. Contributed to the transaction PIN.
- Designed and built a campaign engine (vouchers, cashback, referral codes, point grants) with company-level targeting, quotas and per-user limits.
- Automated invoice warning-letter escalation with an approval step, investor maturity reminders (PIC) and contract-data clean-up. Contributed to PPOB transaction limits and approvals.

Software Engineer Intern — Duluin (PT. Rasa Aksata Nusantara), Bandung Feb 2025 – Apr 2025

- Built the Laravel side of a scheduled push-broadcast system (Redis queue, duplicate-send protection), delivering event, reminder and promotion messages as Firebase push notifications.
- Built the company landing page; contributed to campaign management (vouchers, cashback, point injection).

Frontend Web Developer — NTT Ltd., Jakarta Jul 2023 – Jul 2024

- Built a Python/Flask portal that automates preventive-maintenance reports, cutting preparation from about two weeks to about two minutes.
- Integrated REST APIs, tested with Postman, deployed to internal infrastructure, and wrote the functional specification document.

Teaching Assistant — Telkom University, Bandung Oct 2022 – Dec 2022, Mar 2023 – Jun 2023

- Ran lab and review sessions for Database and Programming Algorithms.

SELECTED PROJECTS

- **Extracting Identity from a Monolith** — Event-driven auth service migration across Node.js and Go services with RabbitMQ, MySQL and Redis.
- **ROI Calculation & Bank Disbursement** — Lockable payout snapshots, split payouts and role-based approval over a bank API.
- **Auth & API Security for Partner Integrations** — OAuth2 client/tenant credentials, TOTP 2FA and token-bucket rate limiting.

EDUCATION

Diploma (D3) in Software Engineering — Telkom University, Bandung Sep 2021 – Jul 2024
